PROFILE

Mixed-methods researcher who designs every study around the decision it needs to inform. Seven years across survey design, in-depth interviews, and statistical modeling in R and Python, translating dense analysis into recommendations stakeholders act on. In consumer insights and market research because what people use and rely on matters, and understanding them well enough to make it serve them better is work worth doing.

EXPERIENCE

Research & Insights Analyst

Liberal Arts Instructional Technology Services

August 2022 – September 2025

The University of Texas at Austin

- Managed a portfolio of 7–10 faculty clients per semester across 15 online courses, investigating course and faculty needs and recommending research-informed solutions using established and self-designed tools.
- Designed and executed mixed-methods analyses of exam-taking data across 150+ assessments per semester, translating findings into weekly narratives and analytical memos that drove measurable policy change.
- Investigated and synthesized research on emerging tools, establishing evaluation frameworks and authoring 4 best-practices documents used by clients and project managers.
- Influenced university-level policy, including at least one tool adoption, by translating research findings into actionable recommendations.
- Built and maintained internal tracking systems and longitudinal databases to monitor program performance and surface trends over time.

Instructor & Learning Experience Designer

Department of Linguistics

January 2020 – August 2022

The University of Texas at Austin

- Designed and delivered a full semester course from the ground up, creating 34 lectures and 14 assessments tailored to both specialist and general audiences.
- Identified recurring comprehension gaps through 1:1 student sessions and assessment patterns, informing course design adjustments and developing applied intuition for how non-experts encounter and process unfamiliar concepts.

Research Scientist

Department of Linguistics

August 2017 – August 2024

The University of Texas at Austin

- Designed and administered 5 large-scale mixed-methods studies, combining survey research (binary and Likert-scale), in-depth interviews, and corpus analysis across independent projects.
- Managed and analyzed an 890-million-token database, performing classification, statistical modeling, and data visualization in R; presented findings at 2 professional conferences.
- Applied advanced statistical methods (linear mixed-effects models, planned comparisons) to behavioral data, translating outputs into accessible findings for non-specialist audiences.
- Led qualitative interview research across 4 projects, synthesizing participant insights with quantitative data to build richer, more actionable conclusions.

EDUCATION

The University of Texas at Austin

Doctor of Philosophy in Linguistics

August 2024

Northwestern University

Dual B.A./M.A. in Linguistics

June 2016

SKILLS AND TOOLS

Research Methods

Survey design (Qualtrics, Google Forms), in-depth interviews, usability studies, mixed-methods research, experimental design, longitudinal study design

Analysis & Statistics

R (lme4, emmeans, dplyr, ggplot2), Python, SPSS, SQL, statistical modeling, data visualization

Stakeholder & PM

Multi-client portfolio management, executive reporting, policy advising, cross-functional collaboration

Tools

Qualtrics, SPSS, Excel, psychopy, grants.gov

Language

English (native), Modern Hebrew (fluent)
